Guidance from Domestic & International Standards

An effective means of escape route signing system is one that provides consistent, repetitive information throughout the whole of the means of escape. To avoid confusion, all of the signs installed should be of a similar style, design, size and format, allowing occupants to predict where the next sited sign will be when evacuating the premises.

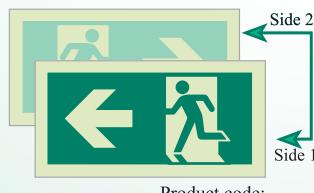

Directional arrow

The correct use and siting of a directional arrow is the most important element of an escape route sign - its sole purpose is to ensure that occupants can evacuate a building confidently, within the shortest possible time.

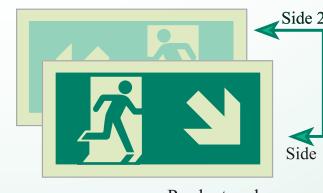

Double-Sided Signs

- ◇ **JALITE AAA** double-sided Rigid PVC signs are perfect for when the escape route is required to be identified from both sides.
